

SHAHUL HAMEED M Y

Lead Quality Assurance Engineer | AI/LLM & Test Automation

543215361 | shahulhameedmy@gmail.com | [LinkedIn](#) | [GitHub](#)

ABOUT ME

Quality Assurance and Test Automation leader with 15+ years across aviation, banking, and enterprise software, now specialized in testing generative-AI systems. Led QA teams of 20+ engineers and pioneered AI-driven quality engineering at Emirates — owning testing for a RAG-based HR-policy chatbot and an agentic AI test-automation platform (Playwright MCP + Claude Opus/Sonnet). Skilled in evaluating non-deterministic LLM outputs, RAG pipeline quality (retrieval relevance, chunk quality, end-to-end answer accuracy), prompt regression, conversational context validation, and AI security testing (prompt injection, data leakage, output safety). Turn fuzzy AI quality into business-aligned metrics and lower defect-escape rates, while fostering a blameless, quality-first culture. Advocate building agentic AI testing on Claude Code (MCP, subagents, headless CI) rather than bespoke or vendor-locked platforms.

SKILLS

- **AI / LLM & GenAI Testing:** RAG pipeline testing (retrieval precision/recall, chunk quality, end-to-end answer accuracy), LLM evaluation (DeepEval, custom quality metrics, human-in-the-loop pipelines), prompt regression testing, non-deterministic output validation, conversational context & memory-retrieval testing, agent testing (tool-call reliability, decision-path validation, loop detection)
- **AI Security Testing:** prompt injection & jailbreak testing (direct/indirect), PII & sensitive-data leakage probes, system-prompt disclosure checks, hallucination / toxicity / bias detection, guardrail verification, content-policy compliance
- **Agentic AI Tooling:** Playwright MCP (Model Context Protocol), Playwright CLI, Claude Code, GitHub Copilot, Claude (Opus/Sonnet)
- **Test Automation:** Playwright, Selenium WebDriver, WebdriverIO, Appium; TestNG, JUnit, Cucumber (BDD), Karate, Jest, Mocha, RestAssured, Postman
- **Languages:** Java, JavaScript, Python, Groovy, SQL
- **API & Performance:** Contract / integration / load testing; RestAssured, Postman, PACT, WireMock; JMeter, Gatling, K6 (latency-percentile, token-usage & cost-per-request analysis for AI workloads)
- **Security:** OWASP ZAP, Burp Suite, SonarQube | CI/CD & VCS: Jenkins, Git, GitHub Actions
- **Cloud & Containers:** AWS, Azure, Docker, Kubernetes, OpenShift | Observability: ELK Stack
- **Process & Leadership:** QE strategy, test architecture, team leadership & mentoring, Agile/Scrum, SDLC, risk-based testing, quality metrics & business-outcome reporting, JIRA, Confluence

WORK EXPERIENCE

Emirates

Dubai, UAE |

Lead Quality Assurance Engineer

Feb 2023 – Jan 2026

- Led a multidisciplinary QA team of 20+ engineers, owning test strategy and automation architecture across Emirates' digital platforms and, latterly, its generative-AI initiatives. RAG chatbot quality: Owned QA for an HR-policy conversational AI chatbot (Retrieval-Augmented Generation) — validated retrieval relevance, chunk quality, and end-to-end answer accuracy against the HR knowledge base, and tested conversational context maintenance and memory-retrieval accuracy across multi-turn flows. Non-deterministic test strategy: Designed evaluation approaches for LLM outputs where exact-match assertions fail — established "good enough" quality boundaries, custom scoring metrics, human-in-the-loop review, and prompt regression detection across diverse inputs. AI security testing: Executed prompt injection and jailbreak attempts (direct/indirect), PII and sensitive-HRdata leakage probes, and system-prompt disclosure checks; validated output safety (hallucination, toxicity, bias, content-policy) and verified guardrails actually held. Agentic AI automation: Pioneered agentic AI testing for the Sky Express platform — integrated Playwright MCP with Claude (Opus for test planning, Sonnet for test-case authoring and self-healing) via Git Hub Copilot and Claude Code, enabling AI-agent-driven browser automation and cutting manual test-authoring effort ~35%. Established quality metrics that connect to business outcomes (defect-escape rate, user-reported issues, AI-specific quality indicators) rather than vanity pass/fail counts, and drove ~35% gains in team efficiency. Partnered across development, product, and data teams to embed quality early — making testing easy to adopt and shifting quality left without friction. SHRAS IT Solutions — Senior Quality Assurance Engineer (Client: Aviation / Emirates)

Dubai, UAE |

Designed and maintained the test automation framework securing quality and reliability of the airline's

Dec 2021 – Jan 2023

- digital systems. Authored detailed test plans and multi-layer test scenarios; improved coverage and execution efficiency through automation. Enforced data integrity with SQL-based database testing and conducted cross-platform usability testing. Altimetrik India Pvt Ltd — Senior Staff Engineer, Quality Engineering, incorporating Iso into the workflow

Chennai, India |

Built a scalable Selenium WebDriver framework (Page Object Model), improving test maintenance and

Apr 2021 – Dec 2021

- execution efficiency by 40%. Automated 1000+ regression cases across web and mobile, cutting testing time 70% with no loss of quality. Delivered a centralized SQL-based test data management solution; improved defect resolution time 25%, with a strong focus on Corrective And Preventive Actions.

Emirates NBD

Dubai, UAE |

Automation Test Lead

Aug 2018 – Mar 2021

- Led end-to-end automation framework builds from scratch (Rest Assured + Java + Test NG), achieving 100% API test coverage across all service layers. Stood up CI/CD pipelines for API automation in Jenkins, enabling automated execution and reporting. Delivered against the Retail Transformation program, revamping online and mobile banking applications, backed by working knowledge of Computer Science.

Wipro Ltd

Chennai, India |

Technical Lead

Dec 2017 – Aug 2018

- Implemented a Jenkins + Docker CI/CD pipeline reaching 90%+ automated test coverage. Scaled performance testing by integrating JMeter with cloud-based load generators; mentored a team of 8 QA engineers, leveraging Capa throughout the process.

Newt Global

Chennai, India |

Senior Software Automation Engineer

May 2016 – Nov 2017

- Built a custom test reporting framework for real-time visibility into results, defects, and quality metrics; championed BDD with Cucumber, raising testing efficiency 30%, while applying Audit Reports best practices.

HCL Technologies Ltd

Chennai, India |

Senior Software Engineer

Dec 2010 – Apr 2016

- Introduced TDD across the SDLC (30% defect-rate reduction) and delivered automation that cut testing cycles 40% while sustaining quality, with hands-on Audit experience.

PROJECTS

Nexus Hiring — Technical Assessment Platform (personal project)

- Built a Playwright-based technical-assessment platform for hiring test-automation engineers — auto- provisions a per-candidate GitHub Codespace with randomized coding challenges (UI and API tracks, multiple languages).
- Runs hidden mutation-based grading server-side and auto-revokes candidate access on expiry — fully automated candidate lifecycle.
- Engineered with zero external database (state encoded in repo names/git) and zero paid seats — deliberately low-cost, low-ops.
- Automated the full SDLC and STLC with Claude Code (Anthropic's agentic coding CLI) — AI-driven development, test generation, and execution — a working proof of the "build agentic automation on Claude Code, not vendor-locked AI" approach.
- Stack: Node.js, Fastify, React/Vite, GitHub API.

EDUCATION

Bachelor of Computer Applications (BCA)

CERTIFICATIONS

- ISTQB Certified Tester — Foundation Level (CTFL)
